Tevin Rivera

Philadelphia, PA tevdevelops@gmail.com linkedin.com/in/tevdevelops tevdevelops.com

SUMMARY

Senior front end developer specializing in Vue, Nuxt, and TypeScript, with nearly a decade of experience across e-commerce, hospitality, and agency work. Skilled at pulling data from many systems into fast, seamless user experiences, and at stepping back from the component in front of me to ask what problem we are really trying to solve. Experienced in web performance (Core Web Vitals) and ADA accessibility.

EXPERIENCE

Senior Front End Developer

Brad's Deals **January 2024 - November 2026, Philadelphia, PA (Remote)**

- Helped migrate the site from a legacy Rails build to a modern Vue/Nuxt application, then kept evolving it through repeated rebuilds and redesigns.
- Unified data of Contentstack, Redis-cached layers over internal APIs, a legacy CMS, and several internal microservices into a single codebase, so content loads efficiently and reads to users as if it came from one source.
- Continuously monitored and improved Google PageSpeed and Core Web Vitals metrics, including load times and Cumulative Layout Shift (CLS), as the site evolved.
- Kept ADA accessibility in scope across new pages, components, and redesigns.
- Used Claude Code to prototype, build, review, and help ship features, speeding up delivery while keeping human judgment on problem definition and quality.

Front End Developer

Brad's Deals **January 2023 - January 2024, Philadelphia, PA (Remote)**

- Built and shipped membership features, including gated member-only deals and acquisition modals (general and campaign-specific) that supported marketing efforts.
- Redesigned the post detail page and contributed to a site-wide refresh of the color palette and visual design.

Web Developer, then Senior Web Developer

King & Partners **April 2019 - August 2022, Philadelphia, PA (Remote)**

- Led and supported development projects for fashion, hospitality, and e-commerce clients.
- Worked directly with creative and account management teams to plan timelines, processes, and communication standards.
- Built on a headless stack using Vue, Nuxt, Elasticsearch, Redis, WordPress, and AWS.
- Prioritized ADA accessibility on e-commerce and hospitality projects, building interfaces that work for all users.

Co-Founder and Fullstack Developer

Jolt Creative Agency **February 2018 - March 2019, Philadelphia, PA**

- Led all development and acted as project lead, identifying client problems and mapping and building solutions with the team.
- Full stack work with a focus on front end design, VR/AR, React, and Python/Django.

Web Developer

Brainyloft **March 2017 - February 2018, Philadelphia, PA**

- First full-time hire; covered web development, UX/UI design, project management, and client communication.

EDUCATION

B.S. Computer Science

Rutgers University - Camden • 2017

SKILLS

Front end: Vue.js, Nuxt.js, TypeScript, JavaScript, HTML, CSS

Data and back end: REST APIs, JSON, Redis, Elasticsearch, Contentstack, WordPress, Python

Tools and platforms: Claude Code, AWS, Git, GitHub, Cloudflare

Performance and accessibility: Core Web Vitals / PageSpeed, Web Accessibility (ADA/WCAG)
